TO-247AC (TO-3P) Plastic Package**

The HEXFET® technology is the key to International Rectifier's advanced line of power MOSFET transistors. The efficient geometry and unique processing of this latest "State of the Art" design achieves very low on-state resistance combined with high transconductance; superior reverse energy and diode recovery dv/dt capability.

The HEXFET transistors also feature all of the well established advantages of MOSFETs such as voltage control, very fast switching, ease of paralleling and temperature stability of the electrical parameters.

They are well suited for applications such as switching power supplies, motor controls, inverters, choppers, audio amplifiers and high energy pulse circuits.

Product Summary

Part Number	BV _{DSS}	R _{DS(on)}	I _D
IRFP250	200V	0.085Ω	33A
IRFP251	150V	0.085Ω	33A
IRFP252	200V	0.120Ω	27A
IRFP253	150V	0.120Ω	27A

Features:

- Isolated Central Mounting Hole
- Repetitive Avalanche Ratings
- Dynamic dv/dt Rating
- Simple Drive Requirements
- Ease of Paralleling
