General Description

The SS41F is an integrated Hall effect latched sensor designed for electronic commutation of brush-less DC motor applications. The device integrates a voltage regulator, reverse battery protection diode, Hall sensor with dynamic offset cancellation system, temperature compensation circuitry, small signal amplifier, Schmitt trigger and an open-collector output to sink up to 25 mA.

These Hall-effect switches are monolithic integrated circuits with tighter magnetic specifications, designed to operate continuously over extended temperatures to +150°C, and are more stable with both

temperature and supply voltage changes. If a magnetic flux density larger than threshold B_{op} , Output is turned on (low). The output state is held until a magnetic flux density reversal falls below B_{rp} , causing Output to be turned off (high).

Thanks to its wide operating voltage range and extended choice of temperature range, it is quite suitable for use in DC motor applications.

The device is delivered in a Small Outline Transistor (SOT) or in a Plastic Single In Line (SIP 3L flat). Both 3-lead packages are RoHS compliant.

Glossary of Terms

MilliTesla (mT), Gauss	Units of magnetic flux density: 1mT = 10 Gauss
RoHS	Restriction of Hazardous Substances
Operating Point (B_{OP})	Magnetic flux density applied on the branded side of the package which turns the output driver ON ($V_{OUT} = V_{DSon}$)
Release Point (B_{RP})	Magnetic flux density applied on the branded side of the package which turns the output driver OFF ($V_{OUT} = \text{high}$)

Pin Definitions and Descriptions

1	1	V _{DD}	Supply	Supply Voltage pin
2	3	OUT	Output	Open Drain Output pin
3	2	GND	Ground	Ground pin

Absolute Maximum Ratings

Parameter	Symbol	Value	Units
Supply Voltage	V _{DD}	28	V
Supply Current	I _{DD}	50	mA
Output Voltage	V _{OUT}	28	V
Output Current	I _{OUT}	50	mA
Storage Temperature Range	T _S	-65 to 170	°C

Operating Temperature Range	Symbol	Value	Units
Temperature Suffix "E"	T _A	-40 to 85	°C
Temperature Suffix "K"	T _A	-40 to 125	°C

Output Behavior versus Magnetic Pole

DC Operating Parameters $T_A = -40^\circ\text{C}$ to 150°C , $V_{DD} = 4.5$ to 24V (unless otherwise specified)

Test Conditions (UA)	Test Conditions (SO)	OUT
$B < B_{RP}$	$B > B_{RP}$	High
$B > B_{OP}$	$B < B_{OP}$	Low

The SOT-23 device is reversed from the UA package. The SOT-23 output transistor will be turned on (drops low) in the presence of a sufficiently strong North pole magnetic field applied to the marked face and turned off (hoists high) in the presence of a sufficiently strong South pole magnetic field.
